

Measuring and calculating the length of the Protection Roof

1. Measuring the length of the roof

The above drawings show you how to measure the length of the roof of the various types of vehicle.

2. Add to this length approx. 45 cm for integrated, partially integrated campers and also caravans. (For models called Alcove, add approx. 55 cm) This calculation accounts for a 20cm Soft Block at Rear (Y) and a 10cm Soft block at front (X)

3. Check the calculated figure at Step 2 with a measuring tape by simulating the soft blocks front and rear (between points A and B)

4. Find the corresponding size (1 to 8) in the list

Size	Length of the protective roof
1	480cm - 520cm
2	521cm - 560cm
3	561cm - 605cm
4	606cm - 645cm
5	646cm - 685cm
6	686cm - 725cm
7	726cm - 765cm
8	766cm - 805cm
XL	Special sizes

Vehicle:

Type: Fully Integrated Part. Integrated Alcove Caravan

Total Length of roof line (as per drawing above) _____ cm

Add:

- Fully-, Partially Integrated and caravans + 45 cm
- Alcove: + 55 cm

Protective-Roof length, incl. addition = Size Nr. _____ = _____ cm
